

Ploby

We draw the line an AI purchasing agent spends inside, and we record every stop.

Client-funded project expenses · Monad testnet

Problem and initial customer hypothesis

Shared spending decisions

Agencies buy domains, hosting and design tools. The client needs an agreed spending scope and evidence for reimbursement.

Ploby applies the agreement to each request and keeps a record that explains each payment.

A project expense, end to end

- 01 Agree on vendors and a spending cap
- 02 Reserve an allowed purchase
- 03 Submit and review the receipt
- 04 Settle and export the evidence

The agent adapts to a policy result

A1 · Purchase results and reasons 2 reserved · 0 awaiting review · 2 blocked #8 ^

Set up a one-year domain, get 40 stock photos (use the 10-image plan as a fallback), and buy an office keyboard.

Live API call Kiln qwen3-32b · 1495 tokens · \$0.00014 · 3.14 s

- 1. Set up a one-year domain** The offer provides a one-year domain registration for ondam-cafe.co.kr, which directly fulfills the task.
Gabia domain quote (₩24,200) **E1 APPROVE**
- 2. Get 40 stock photos** The 40-image plan (o3) directly meets the requirement, while the 10-image plan (o4) serves as a suitable fallback.
Adobe Stock 40-image pack (₩203,500, over cap with VAT) **E2 BLOCK · Per-purchase limit**
→ Adobe Stock 10-image pack (₩55,000) **E3 APPROVE**
- 3. Buy an office keyboard** The offer provides a mechanical keyboard that is appropriate for office use and matches the task requirement.
Coupang mechanical keyboard (₩129,000, off-list) **E4 BLOCK · Vendor**

40 images: ₩203,500

BLOCK

The total exceeds the ₩200,000 purchase cap.

10 images: ₩55,000

APPROVE

The agent tries its next planned offer and reserves it.

Two separate runs, two recorded stops

Run A1 / Vendor outside the agreed list

A1 · Purchase results and reasons 0 reserved · 0 awaiting review · 1 blocked #8 ^

Request this mechanical keyboard for our project office.

Live API call Kiln qwen3-32b · 655 tokens · \$0.00005 · 1.36 s

1. mechanical keyboard for project office The offer provides a mechanical keyboard matching the request.

Coupage mechanical keyboard (₩129,000, off-list) **E1 BLOCK · Vendor**

Run A2 / Total exceeds the ₩200,000 cap

A2 · Purchase results and reasons 0 reserved · 0 awaiting review · 1 blocked #11 ^

Request the 40-image stock-photo pack for the website.

Live API call Kiln qwen3-32b · 654 tokens · \$0.00005 · 1.36 s

1. 40-image stock-photo pack for the website The offer provides a pack of 40 standard license images suitable for website use, exactly as requested.

Adobe Stock 40-image pack (₩203,500, over cap with VAT) **E2 BLOCK · Per-purchase limit**

Control boundaries and wallet approvals

Layer	Responsibility
Kiln · qwen3-32b	Plans offers and extracts document fields. No private key or payee field in the model output.
Policy engine	Applies 15 checks to each request. Keeps the same inputs for independent replay.
Monad escrow	Enforces funded balances, reservations, fixed payee and pausing of new commitments.

Optional wallet mode

EIP-712 binds approval to the exact action and log head.
The engine verifies it; the deployed contract still trusts its operator.

A payment reconstructed from the records

~~₩~~24,200

TestKRW settled after receipt approval

31 log entries

5 original documents

13 matching chain calls

Partially verified · 1 of 1 payments inside what was allowed · 4 stops recorded · records consistent

Original documents: ✓ 5/5

Public chain: ✓ Compared

Human approval: Demo signatures or pending approvals

Demo signatures support replay. They do not independently prove a person's approval.

► Payment, rule and transaction details

Recorded demo: documents and chain match. Human approval uses demo signatures, so the verifier reports partial verification. Wallet mode verifies real EIP-712 proofs.

Checks for decisions, state and money

Verification	Coverage	Observed result
Business rules	Budgets, holds, deadlines, settlement	64 checks passed
New regressions	Evidence export, audit verdict, wallet proofs, stopped-agent rerun	8 checks passed
Randomized engine runs	Conservation of funds and state	200 scenarios passed
Solidity contracts	Current escrow + legacy contract	12 + 15 tests passed

Live boundary runs

Over-cap offer blocked · unlisted vendor blocked · paused task stops after one request

Measured inference efficiency

Eight matched documents	First read	Exact cache replay
Expected policy outcomes	8 / 8	8 / 8
Inference API requests	8	0
Prompt / completion tokens	5,067 / 986	0 / 0 newly sent
Reported inference cost	\$0.000525	\$0
Median document-read time	2.299 s	0.0014 s

Energy estimate: 0.092–1.679 Wh for the first reads

Accelerator assumptions, not measured Kiln power. Cache figures describe repeated requests on these fixtures; they do not establish accuracy on unseen documents.

Commercial focus and alternatives

Existing infrastructure	Documented strength
Stripe shared payment tokens	Seller, amount and time-limited payment credentials
Coinbase Agentic Wallet	Agent wallet tools and spending limits
Safe smart accounts	Treasury permissions and programmable policies

Ploby's product focus

Bilateral project terms, receipt settlement and a portable record of why each payment passed.

Validation plan: 3 agencies / 10 projects. Pricing hypothesis: \$49 per workspace per month.
Measure approval time and reconciliation exceptions before making revenue claims.

Roadmap toward production control

Now

Demonstrable controls

Testnet settlement, optional wallet approvals, evidence export and reproducible checks.

Next

Reduce trusted operator powers

Verify approvals and tighter policy limits on chain.
Exit: independent review plus key-recovery and failure tests.

Pilot

Connect evidence to real operations

Vendor-authenticated receipts and agency pilots.
Exit: measured customer value and a reviewed path to real-money use.
